Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16 are rejected under 35 U.S.C. 102(b) as being anticipated by (French Patent 2774149). (French Patent 2774149) discloses a vehicle headlight comprising: a reflector 20 defining an optical axis, the headlight defining two horizontal half planes at different heights', and a horizontal light source 10 oriented in relation to the reflector transversely to the said optical axis, the headlight being such as to generate a beam of light radiation from said light source 10 reflected from the reflector 20, in which the light beam defines a cut-off delimited by the said half planes, wherein the headlight further defines a horizontal axis transverse to the said optical axis, the reflector being divided into a first sector 225 and further sectors (212-228), the first sector being obtained geometrically by notional rotation of the first sector about the said horizontal axis transverse to the optical axis, from an initial position in which the first sector 225 is continuous with adjacent said further sectors without discontinuity (215 joins 225), the first sector being dedicated to generating images situated below the upper of the two said half

planes delimiting said cut-off.

Response to Arguments

1. Applicant's arguments filed 01/05/04 have been fully considered but they are not persuasive. The applicant argues that '149 patent has sectors (215-225) which generate images which are horizontal so as to make for the horizontal part of the cut-off line. However, as broadly claimed the 149' patent disclose a first sector 225 being dedicated to generating images situated below the upper of two half planes delimiting a cut-off. As seen in figures 14-27 of the '149 patent, at least some light reflected from sector 225 would direct light below the upper of two half planes delimiting a cut-off.
